## EDUCATION

### The Ohio State University

Columbus, OH

B.S. Data Analytics | GPA: 3.57/4.00 | Dean's List (AU22–SP26)

May 2026

Relevant Coursework: Statistical Models, Data Mining, Predictive Analysis, Bayesian Analysis, Data Structures & Algorithms

## TECHNICAL SKILLS

**Languages:** Python, R, SQL

**Libraries & Tools:** pandas, NumPy, scikit-learn, matplotlib, seaborn, Google BigQuery

**Visualization & BI:** Tableau, Excel, Power BI

**Other:** Git/GitHub, DuckDB, DBeaver, HTML/CSS, ETL pipelines, Dashboard development, A/B testing

## WORK EXPERIENCE

### Analytics Chair | Union of Vietnamese Student Association (UVSA-Midwest) · Nonprofit

Apr 2025 – May 2026

- Owned end-to-end data workflows across 5+ committees: extracting, cleaning, and reporting on ad-hoc requests, building Tableau dashboards tracking Cabinet KPIs, and translating ambiguous business questions into actionable insights for non-technical stakeholders

## PROJECTS

### Superstore Sales Performance [Dashboard](#) | SQL (DuckDB), Python, Tableau

- Wrote 7 business-driven SQL queries in DuckDB/DBeaver to identify \$17,725 in annual losses from Tables sub-category (-8.56% margin) driven by a 26% average discount rate
- Built end-to-end pipeline from raw CSV through Python (pandas, seaborn) to a published Tableau Public dashboard with KPI cards, regional map, and interactive filters
- Uncovered margin compression in 2017 despite 51% revenue growth over 4 years, attributing root cause to Furniture discounting and Central region pricing gaps

### Logistics Operations Dashboard | PowerBI, DAX, Excel

- Built a two-page Power BI dashboard across 14 interconnected tables and 361,799 records, modeling a star schema with 14 DAX measures covering revenue, delivery performance, fuel trends, and fleet cost analysis
- Identified a systemic on-time delivery rate of 55.67% (well below the 85–95% industry benchmark) consistent across all 8 origin cities, ruling out route-specific causes and flagging an operational-level issue requiring executive intervention
- Surfaced \$95.59M in fuel spend as the dominant cost driver (17x maintenance costs), isolated TRK00003 as a high-maintenance outlier signaling end-of-life risk, and flagged customer revenue concentration in two accounts as a material business risk

### A/B Test Analysis: Landing Page Experiment | Python (pandas, scipy, matplotlib, seaborn)

- Ran a chi-square test on 290,584 users, finding no statistically significant difference in conversion rates ( $p = 0.19$ , Cohen's  $h = 0.005$ ); recommended against shipping the new page as the data showed no meaningful lift

### IGS Energy - Battery Optimization (Capstone) | R, Python, Tableau

- Designed and validated a time-series regression model on energy consumption data projecting \$1,700+/year in customer savings, delivering executive-facing Tableau dashboards with model outputs, trends, and business recommendations.

## EXTRACURRICULAR ACTIVITIES

### Big Data & Analytics Club | The Ohio State University

Aug 2023 – May 2026

- Engaged in workshops, speaker events, and hackathons focused on real-world data analytics applications and industry trends

### Lion Dance Leader | The Ohio State University

Aug 2024 – May 2026

- Led weekly practices and coordinated performances for 6+ team members, demonstrating leadership and cross-cultural communication
